Data Activities Portfolio

The Data Portfolio is a compendium of particle physics classroom activities organized by data strand and level of student engagement. Follow the links provided for information about using the Data Portfolio to plan your students' experience. **Level descriptions** explain the data analysis skills that students apply at each level: tasks in Level 0 are simpler than those in Levels 1 and 2. While each level can be explored individually, students who start in one level and progress to more complex levels experience increasingly engaging and challenging tasks. These activities are aligned with **NGSS Standards**, particularly NGSS Practices.

Your students can follow a path through activities in a data strand to better understand practices that lead to discovery. Each pathway provides connections between topics routinely covered in physics class and particle physics content and methods. Use the pull-down menus (Pathway and Strand) to find activities related to the content you are currently covering.

Example 1 Results

ACTIVITY NAME	DATA STRAND	LEVEL	CURRICULUM TOPICS	NGSS PRACTICES
 <p>Mass of U.S. Pennies Students create and interpret a histogram of penny masses.</p>	Cosmic Ray, LHC	Level 0	Skill: Developing Models, Skill: Histograms, Skill: Uncertainty	1, 3, 4, 7
 <p>Dice, Histograms & Probability Students roll dice, record the resulting individual values as well as the sum of the values, create histograms of the data and develop insight into the concept of "degrees of freedom."</p>	Cosmic Ray, LHC	Level 0	Skill: Developing Models, Skill: Histograms, Skill: Uncertainty	1, 2, 3, 4, 5, 6, 7, 8
 <p>Histograms: The Basics Students build basic histogram skills required in many of the other activities in the Data Activities Portfolio.</p>	Cosmic Ray, LHC, Neutrino	Level 0	Skill: Histograms, Skill: Uncertainty	4, 5
